

OKN Social Command Center

Master Architectural Blueprint & End-to-End Operations Manual

Target Ecosystem: OKN Token (<https://okntoken.com>) & OKNEXUS Exchange (<https://oknexusexchange.com>)

1. Executive Summary & Core Philosophy

The **OKN Social Command Center (OKN Social OS)** is an autonomous social operations and executive intelligence platform purpose-built for the OKN ecosystem. It unifies multi-channel publishing, 7-platform unified community moderation, 12 specialized AI autonomous agents, Sentinel real-time threat gating, and executive performance analytics into a single Apple Liquid Glass interface.

Two First-Class Ecosystem Entities:

- **OKN Token** (<https://okntoken.com>): The utility token and decentralized community engine.
- **OKNEXUS Exchange** (<https://oknexusexchange.com>): The institutional-grade perpetual DEX and liquidity infrastructure.

2. System Architecture & Module Blueprint

The platform is structured into 12 dedicated operational workspaces accessible via the responsive command shell:

Workspace Module	Core Functionality	Autonomous Capabilities
Command Center	Executive overview, live KPI cards, sparkline velocity charts, pipeline snapshot.	Automated daily briefing, risk index scoring, priority alert triage.
AI Social Director	Operational intelligence engine with 9-capability matrix and live decision stream.	Continuous reasoning stream, autonomous task dispatching, risk gating.
Unified Inbox	3-pane customer relationship inbox across X, IG, LinkedIn, Telegram, YT, TikTok, FB.	Intent classification, sentiment scoring, AI-suggested brand responses.
Content Studio	Multi-channel composer with 7-platform adaptive synthesis via live Gemini AI.	Auto-tailoring character limits, hashtag extraction, real-time safety gating.
Content Calendar	Interactive release calendar (Month/Week/List views) with scheduled time slots.	Automated scheduling window optimization based on audience activity.
Campaign Builder	Multi-stage campaign architecture (Teaser → Educational → Launch → Community).	Reach milestones, budget allocation tracking, phase progression bars.
Media Vault	Curated brand asset library with aspect ratio tags and metadata inspector.	Auto-tagging, dimension validation, quick-attach to Content Studio.
Analytics	Executive SVG area charts for 7d/30d/90d reach, impressions, audience breakdown.	Automated engagement velocity and follower trend calculations.
Social Accounts	Connected platform health monitor, OAuth diagnostics, sync status.	Token expiration warning, auto-reply permissions, rate limit tracking.
AI Agent Matrix	Roster of 12 specialized agents with granular autonomy level selectors.	Accuracy rate tracking, task completion counter, execution logs.
Project AI Brain	Knowledge base governing approved voice, official URLs, and forbidden claims.	Direct constraint layer for all Gemini generation and reply drafting.

System Settings	Supabase RLS database diagnostics, security audit logs, API key management.	Passcode security, session persistence, automation policy overrides.
-----------------	---	--

3. Step-by-Step Feature Operations Guide

Follow this operational workflow to manage your entire social lifecycle with zero friction:

Step 1: Security Passcode & Project Switching

- **Passcode Unlock:** The command center is gated by a default security PIN: **1234**. Enter via the tactile numpad or keyboard.
- **Project Switcher:** Click the top-left logo dropdown in the sidebar to toggle between **OKN Token** and **OKNEXUS Exchange**. All metrics, agents, and drafts immediately re-contextualize.

Step 2: Connecting & Managing Social Accounts

- Navigate to **Social Accounts** from the sidebar.
- Click **'Connect Social Account'** to open the integration modal.
- Select from X, Instagram, LinkedIn, Telegram, YouTube, TikTok, or Facebook.
- Set your handle, initial follower baseline, and autonomy permission level (*Approval Required*, *Suggest Only*, or *Autonomous*).

Step 3: Generating Multi-Platform Content with Gemini AI

- Open the **Content Studio** workspace.
- Enter your raw release concept (e.g. *'OKNEXUS perpetual DEX launch at https://oknexusexchange.com'*).
- Click **'♦ AI Adapt via Gemini'** — the server-side Gemini AI engine synthesizes platform-perfect copy for all 7 channels in parallel.
- Inspect live platform previews (X, Instagram, LinkedIn, Telegram) on the right-hand panel.
- Click **'Publish All Now'** to trigger confetti celebration and save to your pipeline.

Step 4: Unified Inbox & Autonomous AI Responses

- Navigate to **Unified Inbox** to view all community inquiries across all channels.
- Click any thread: the Sentinel engine displays intent badges (*Product Question*, *Security Concern*, etc.) and sentiment score.
- Review the **'AI Suggested Brand Response'** box.
- Click **'Insert into Composer'**, review the copy, and hit Send.

Step 5: Managing Campaigns & Scheduling Releases

- Go to **Campaigns** to build multi-phase releases with target reach and budgets.
- Use the **Content Calendar** to review release density by day, week, or month.

■ ■ AI Safety Sentinel Architecture:

Every output generated by Gemini AI or drafted by autonomous agents passes through a 4-tier risk classifier. Content containing prohibited keywords (e.g. *'guaranteed returns'*, *'risk-free'*, *'seed phrase'*, *'100x'*) is automatically blocked or flagged for mandatory human review before publishing.
